# Microsoft Access Tutorials: Table of Contents

## 1. Introduction to Microsoft Access

1.1 Introduction: What is Access?  
1.1.1 The many faces of Access  
1.1.2 What is in an Access database file?  
1.2 Learning objectives  
1.3 Tutorial exercises  
1.3.1 Starting Access  
1.3.2 Creating a new database  
1.3.3 Opening an existing database  
1.3.4 Importing data from other applications  
1.3.5 Getting help  
1.3.6 Compacting your database  
1.4 Discussion  
1.4.1 The database file in Access  
1.4.2 Compacting a database  
1.4.3 Renaming a database  
1.4.4 Developing applications in Access  
1.4.5 Use of linked tables  
1.5 Application to the assignment

## 2. Tables

2.1 Introduction: The importance of good table design  
2.2 Learning objectives  
2.3 Tutorial exercises  
2.3.1 Datasheet basics  
2.3.2 Creating a new table  
2.3.3 Specifying the primary key  
2.3.4 Setting field properties  
2.3.5 Using the input mask wizard  
2.4 Discussion  
2.4.1 Key terminology  
2.4.2 Fields and field properties  
2.4.2.1 Field names  
2.4.2.2 Data types  
2.4.2.3 “Disappearing” numbers in autonumber fields  
2.4.2.4 Input masks  
2.4.2.5 Input masks and literal values
3. Relationships
3.1 Introduction: The advantage of using tables and relationships 1
  3.1.1 “Normalized” table design 3
3.2 Learning objectives 4
3.3 Tutorial exercises 4
  3.3.1 Creating relationships between tables 4
  3.3.2 Editing and deleting relationships 7
3.4 Discussion 7
  3.4.1 One-to-many relationships 7
  3.4.2 Referential integrity 9
3.5 Application to the assignment 10

4. Basic Queries Using QBE
4.1 Introduction: Using queries to get the information you need 1
4.2 Learning objectives 1
4.3 Tutorial exercises 2
  4.3.1 Creating a query 2
  4.3.2 Five basic query operations 2
    4.3.2.1 Projection 2
    4.3.2.2 Sorting 7
    4.3.2.3 Selection 7
    4.3.2.4 Complex selection criteria 7
    4.3.2.5 Joining 11
  4.3.3 Creating calculated fields 15
    4.3.3.1 Refining the calculated field 18
    4.3.3.2 A more complex calculated field 18
  4.3.4 Errors in queries 20
4.4 Discussion 20
  4.4.1 Naming conventions for database objects 20
  4.4.2 The ampersand (&) operator 21
  4.4.3 Using queries to populate tables on the “many” side of a relationship 22
  4.4.4 Non-updatable recordsets 23
4.5 Application to the assignment 27
5. Basic Queries using SQL
5.1 Introduction: The difference between QBE and SQL 1
5.2 Learning objectives 1
5.3 Tutorial exercises 1
  5.3.1 Basic SQL queries 2
  5.3.2 Complex WHERE clauses 4
  5.3.3 Join queries 4
5.4 Discussion 5

5.3.1.4 Binding an unbound text box to a field 9
6. Form Fundamentals
6.1 Introduction: Using forms as the core of an application 1
6.2 Learning objectives 1
6.3 Tutorial exercises 1
  6.3.1 Creating a form from scratch 2
    6.3.1.1 Adding bound text boxes 2
    6.3.1.2 Using a field’s properties to protect its contents 6
    6.3.1.3 Adding an unbound text box 6
  6.3.1.4 Binding an unbound text box to a field 9
6.3.2 Creating a single-column form using the wizard 11
6.4 Discussion 14
  6.4.1 Columnar versus tabular versus datasheet forms 14
  6.5 Application to the assignment 14

7. Subforms
7.1 Introduction: The advantages of forms within forms 1
7.2 Learning objectives 1
7.3 Tutorial exercises 1
  7.3.1 Creating the main form 3
  7.3.2 Creating the subform 3
  7.3.3 Linking the main form and subform 3
  7.3.4 Linking forms and subforms manually 9
  7.3.5 Non-synchronized forms 13
  7.3.6 Aesthetic refinements 13
    7.3.6.1 Changing the form’s caption 13
7.3.6.2 Eliminating unwanted scroll bars and navigation buttons 13
7.4 Application to the assignment 16

<table>
<thead>
<tr>
<th>8. Combo Box Controls</th>
<th>8.4.1 Why you should never use a combo box for a non-concatenated key. 19</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.1 Introduction: What is a combo box? 1</td>
<td>8.4.2 Controls and widgets 21</td>
</tr>
<tr>
<td>8.2 Learning objectives 2</td>
<td>8.5 Application to the assignment 22</td>
</tr>
<tr>
<td>8.3 Tutorial exercises 2</td>
<td></td>
</tr>
<tr>
<td>8.3.1 Creating a bound combo box 2</td>
<td></td>
</tr>
<tr>
<td>8.3.2 Filling in the combo box properties 5</td>
<td></td>
</tr>
<tr>
<td>8.3.3 A combo box based on another table or query 6</td>
<td></td>
</tr>
<tr>
<td>8.3.3.1 Showing more than one field in the combo box 9</td>
<td></td>
</tr>
<tr>
<td>8.3.3.2 Hiding the key field 12</td>
<td></td>
</tr>
<tr>
<td>8.3.3.3 Changing the order of items in the combo box 14</td>
<td></td>
</tr>
<tr>
<td>8.3.4 Changing a form’s tab order 18</td>
<td></td>
</tr>
<tr>
<td>8.4 Discussion 19</td>
<td></td>
</tr>

</table>
10. Parameter Queries
10.1 Introduction: Dynamic queries using parameters 1
10.2 Learning objectives 1
10.3 Tutorial exercises 2
  10.3.1 Simple parameter queries 2
  10.3.2 Using parameters to generate prompts 4
  10.3.3 Values on forms as parameters 4
10.4 Application to the assignment 7

11. Action Queries
11.1 Introduction: Queries that change data 1
  11.1.1 What is an action query? 1
  11.1.2 Why use action queries? 1
11.2 Learning objectives 2
11.3 Tutorial exercises 3
  11.3.1 Using a make-table query to create a backup 3
  11.3.2 Using an update query to rollback changes 3
11.4 Application to the assignment 11
  11.4.1 Rolling back your master tables 11
  11.4.2 Processing transactions 16

12. An Introduction to Visual Basic
12.1 Introduction: Learning the basics of programming 1
  12.1.1 Interacting with the interpreter 1
  12.2 Learning objectives 2
12.3 Tutorial exercises 2
  12.3.1 Invoking the interpreter 2
  12.3.2 Basic programming constructs 3
    12.3.2.1 Statements 3
    12.3.2.2 Variables and assignment 3
14. Data Access Objects

14.1 Introduction: What is the DAO hierarchy?

14.1.1 DAO basics
14.1.2 Properties and methods
14.1.3 Engines, workspaces, etc.

14.2 Learning objectives

14.3 Tutorial exercises

14.3.1 Setting up a database object
14.3.2 Creating a Recordset object
14.3.3 Using a Recordset object
14.3.4 Using the FindFirst method
14.3.5 The DLookUp() function
14.3.5.1 Using DLookUp() in queries
14.3.5.2 Understanding the WHERE clause

14.4 Discussion

14.4.1 VBA versus SQL
14.4.2 Procedural versus Declarative

14.5 Application to the assignment

14.5.1 Using a separate table to store system parameters
14.5.2 Determining outstanding backorders

15. Advanced Triggers

15.1 Introduction: Pulling it all together
15.2 Learning objectives
15.3 Tutorial exercises

15.3.1 Using a macro to run VBA code
15.3.1.1 Creating a wrapper
15.3.1.2 Using the RunCode action

15.3.2 Using activity information to determine the number of credits
15.3.2.1 Scenario
15.3.2.2 Designing the trigger
15.3.2.3 Preliminary activities
15.3.2.4 Looking up the default value
15.3.2.5 Changing the Record Source of the form
15.3.2.6 Creating the SetValue macro
15.3.2.7 Attaching a procedure to the After Update event

15.3.3 Use an unbound combo box to automate search
15.3.3.1 Manual search in Access
15.3.3.2 Preliminaries
15.3.3.3 Creating the unbound combo box
15.3.3.4 Automating the search procedure using a macro

15.3.4 Using Visual Basic code instead of a macro

15.4 Application to the assignment
15.4.1 Triggers to help the user
15.4.2 Updating the BackOrders table
15.4.2.1 Create the pqryItemsToBackOrder query
15.4.2.2 Import the shortcut function
15.4.2.3 Use the function in your application
15.4.2.4 Modifying the UpdateBackOrders() function

15.4.3 Understanding the UpdateBackOrders() function

15.4.4 Annotated source code for the backorders shortcut module.
15.4.4.1 The UpdateBackOrders() function
15.4.4.2 Explanation of the UpdateBackOrders() function
15.4.4.3 The BackOrderItem() subroutine
15.4.4.4 Explanation of the BackOrderItem() subroutine
