Step 1. Click the **Start** button.

Step 2. Click in the **Start Search** box.
Step 3. Type **cmd** in the **Start Search** box.

Step 4. Click the **cmd** application icon in the **Programs** search results at the top of the Start menu.
The **Command Prompt** window opens.

Step 5. Type in `ipconfig /all` and press the **Enter** key.
Properly configured network adapters will be listed in the output. Scroll the window to find your Wireless LAN and Ethernet network adapters.

The highlighted text represents an example Ethernet (Fixed) network adapter MAC address, also called the Physical Address.
The highlighted text represents an example **Wireless network adapter MAC address**, also called the **Physical Address**.

Step 6. Type **exit** and press the **Enter** key to close the **Command Prompt** window.
